.y.

jales on Thuriday, February 2d, and Faitens Evens day which fails on Tuelday, February 28th, there are 14st of shot only 25 days exclusive.

Of the Eclipses of the Luminaries which will happen in

this year, 1693.

Pour times will the inhabitants of this Earthly Starwherein we live, have the Luminaries of Heaven Eclipsea from their fight; twice the Sub, and as often the Moon, and they follow in order, thus.

The first will be a great Eclipse to us in cotland of the Moon, on

Thursday the 13th, day of lanuary, about four of the Clock in the morning, in the beginning of the Celestial Lyon, it will be a visible and a total, nay, almost Central Eclipse, and worthy the industrious A-tronomers observation.

The second will be a great Solar Diliquium on Friday lune the 21d day, a little afternoon: It happens in 12 degrees of the Tropicall Sign Cancer; it will be almost as great an Eclipse as that which happen'd on Munday March

Vincent Wing, about 12 digits of the Sunsbody will be Eclipsed.

Note, that on Munday the 29th day of March Anno 1652, fell out that great Eclipse of the Sun, (ever since in Scotland, called the Dark Munday) which continued from beginning to ending two hours, 46 min. the greatest darkness being about 10 hours, 11 min. forenoon; there being at that time, near 12 digits of the Suns body Eclipsed.

The third will be a great Eclipse of the Moon, upon Isly the 7th day, near our ten of the clock in the morning: It is celebrated in 25 degrees of the heavenly Crab, but as to us in Scotland will be invisible,

the Moon being at that time Sub Terra.

The last will be a Solar defect in 6 degrees of Capricorn on December 16th, about our mid-night; it will be a great Ectivie, but visible to our Agreedes. Thus much of the Eclipies this Year, 1693.

Mar

Moon (by her proper motion from West or East) sinstens upon the West-limb of the Sun, so that the Suns Eclipse doth always begin on the West-side, and end on the East. But the contrary appears in the Lunar Eclipse; for her motion being from West to East, the East part of her body must necessarily first enter the Earths shadow; and so her Eclipse always begins on the East-side, and ends on the West.

The Shining Stars, mov'd in the Heavens clear, GOD by his wondrous Works makes now appear.

The four Seasons of this Year, 1693.

He Spring begins on Friday, March 10th, the Sun entering into the Aquinoctial Sign Aries, making our days and nights equall.

THE Summer Season begins on Sunday, June 11th, the Sun then entering the Tropick Sign Cancer, making our days

longest, and our nights shortest.

He harvest Scason, begins on Wednesday, September 13th the Sun entering into the 2d Aquinoctial Sign Libra, making again our days and nights equall.

He winter Seeson begins on Munday, December 1 1th, the Sun then entring into Capricorn, making the shortest day and longest night.

The four Termly Quarters this Year 1693.

The first Quarter begins on Thursday, February 2d, called

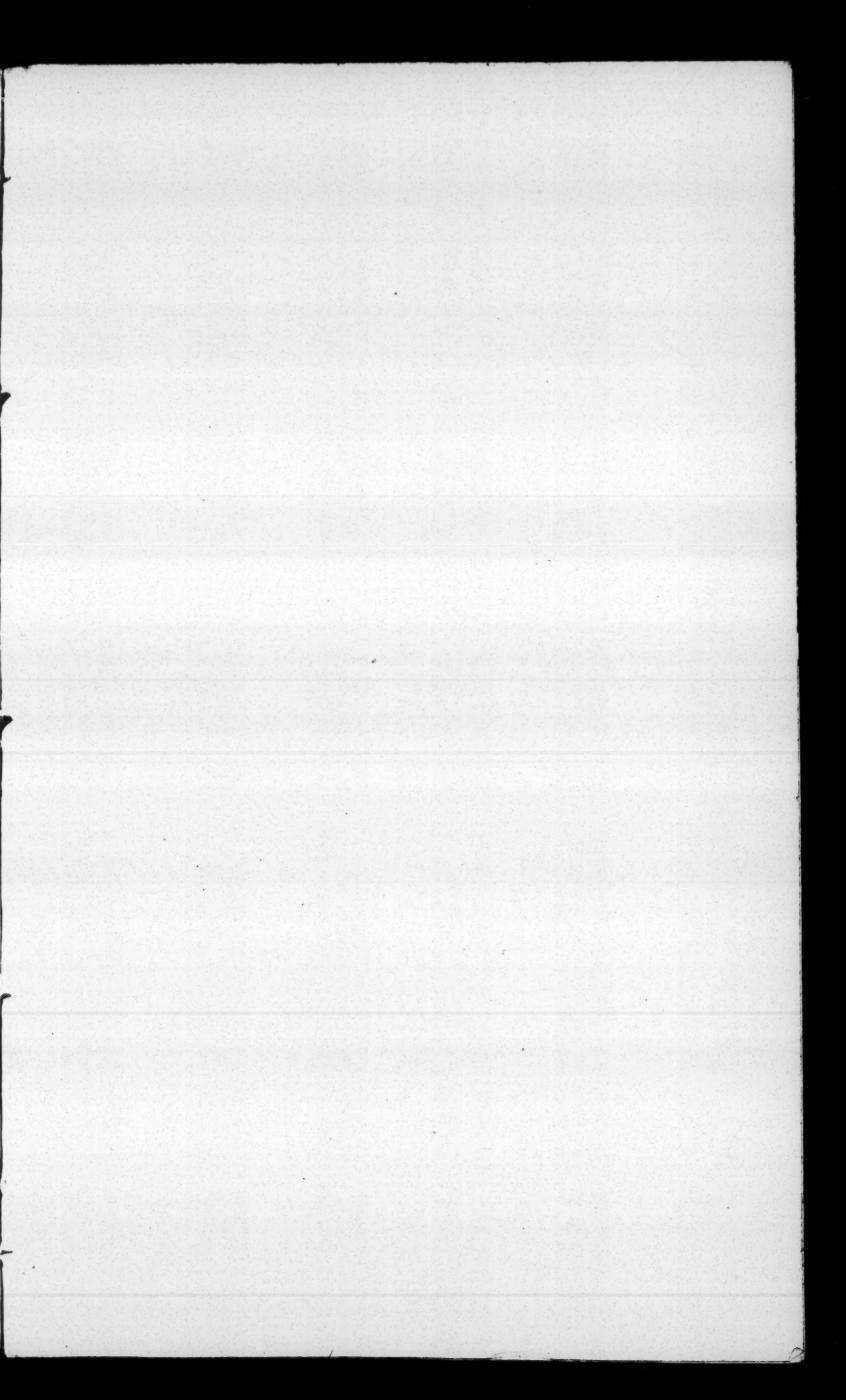

Candlemais, or, our Ladies day.

Second Quarter begens on Munday, May I. Tho the vulgar reckon from May 3, called Rood-day, which is Wednelday this Year.

The third Quarter begins on Thursday August 1. Which is ever Lambas-day, tho the Vulgar mistake it, and call the 2d,

Lambas-day.

The fourth and last Termly Quarter begins on Wednesday November 1. which is called Hallowaday, so that Hallow-Even this Year falls upon Tuesday at Night before, being the last day of October.

17 a The exact Day, Hour and Minut of the new

Shewing the Hour and Minut of Highwater at Leith, for every day of the Moons Age, increasing and Decreasing

The Use. Seek the Moons Age in the first and second Column of the Table, and in the two last Columns you have the true time of full Sea at Leith:

Example. To find the full Sea the 6 day of May, 1693, I find the Moons Age by the following Table to be 12, which I find in the second Column of this Table, and against it in the last Column I find 11 hours and 41 Minuts, the true time of full Sea required.

Very Strange & wonderful Prophesies, which shal fall out this year, 1693.

Twixt Gardon-Castle, and crooked wood,
Many Strangers shall lose their Bood.
Twixt losty Grans-bay Mount, and Marr,
Shall many Strangers come from farr;
Surprised be, the they well pry,
Their Bodits dead, unburied ly.
Some to the Hill-Countrey shall flee:
Some driven back unto the Sea.
Some Prisoners, through their good chance;
Shall be Transported unto France
And there for Gold, they shall be fold,
which for their Ransom shall be told.

A Nd get behold, and you shall see
A Insome parts of the North Countrey;
Many Sailes shall there appear.
And many persons shall take jear.
Many at home shall leave their wives,
Some thousands there shall lose their lives
Tho in that Countrey there be Bread,
The Quick shall seed upon the Dead.

For Burial shop hall not stands
Their Bones hall dry upon the Land

But when the Maiden Meek and Mylda

Buil chale the Lyon that is wold,

Then shall the Strangers be but thin: And Home bred Bargain shall begin.

BEwixt Mont More mount, and the Sea,

A ready Table she wing the Age of the Moon every day throughout this Year, 1693.

o find the Annualrent of any principal sum by this Table, Is the principal sum be under 10 L. seek it under the i Column of the Table and towards the right hand in the second Co. lumn, you have the Annualrent thereof. But If the principal fum be above to L. feek the tens, hundreds or thousands in the third Column, and towards the right hand in the fourth Column you have the Annualrent belonging thereunto; and if there be any odd pounds and shillings. feek them as before, and add their Annualrent to that which you have found, and the total is the Annualrent required.

I Example.

Suppose it be required to find the Annualrent of 138 L. 13 sh. for a year: work thus.

L. Pr. L Ih. d. Interest 100 00 00 16 I 00 30 Annualr. 8 09 07 12 th. 0 00

To find the Annuairent of any sum above 10000 L. which is not in this Table, consider that every 10000 L. thereof is 600 L. Annualrent, and find

chereit as in the Table,

for find the Annualrent of any Sum for one two or three month, &c. take the treelve part of that, which a year yelles, and that will be the Annualrent for a month, its double for two months,

112 triplesorthree, &c.
